

Sample Document

This is an example Markdown document to demonstrate the PDF conversion tool.

Introduction

This tool converts Markdown files into beautifully formatted PDF documents. You can customize the styling using the `config.yaml` file.

Features

The converter supports the following Markdown features:

- **Bold text**
- *Italic text*
- Ordered and unordered lists
- Headings (H1 through H6)
- Links and emphasis
- Code blocks and inline code
- Blockquotes

Lists

Here's an unordered list:

- First item
- Second item
- Third item with a [link](#)

And an ordered list:

1. First step
2. Second step
3. Third step

Code Examples

You can include inline code like `print("Hello, World!")` or code blocks:

```
def greet(name):  
    return f"Hello, {name}!"  
  
print(greet("World"))
```

Blockquotes

This is a blockquote. It can be used for citations or to highlight important information.

Multiple paragraphs are supported.

Conclusion

Edit the `config.yaml` file to change fonts, colors, margins, and more. Enjoy creating your PDFs!

Note: This example demonstrates the basic features supported by the converter.
